Zombie Estate 2 PC is a trademark of Ace of Kong.Q: Why does this even compile? `int i = 10; i = ++i * ++i;` It even compiles. A: Incrementing and post-incrementing is only part of the picture. The real issue here is precedence. `++i` is evaluated first, then the result is used to increase `i`. If that result is 10, then the expression will be the same as `i = 10 + i;` It's because of operator precedence. The post-increment operator is `* ++i` is evaluated first, then the result is used to increase `i`. If that result is 10, then the expression will be the same as `i = 10 + i;` If you use an operator with lower precedence than `*` it will be evaluated from right to left, starting with the operation with the highest precedence. `++i * ++i` is evaluated as `i * (i++ * i)`. The result of this operation is evaluated as `(10 * 10) * i`, which is the same as `10 * i`. Award-winning film "Houses of Hope", featuring Iranian immigrant families and their U.S.-born children who fled to the U.S. after the 1979 revolution.
